

Use this handout to find where Word 2003 commands are located in Word 2007. It consists of the following three sections:

- Navigation tips about getting around in Word 2007.
- New location of buttons from the old *Standard* and *Formatting* toolbars.
- New locations of the old menu items.

NAVIGATION TIPS

Tabbed Ribbons

The old menu system and toolbar buttons have been combined into stationary tabs with buttons on them.

Right click any button to add it to the *Quick Access* toolbar.

Click a tab to view a different set of buttons.

Double click a tab to hide all buttons.

Double click a tab again to view the buttons.

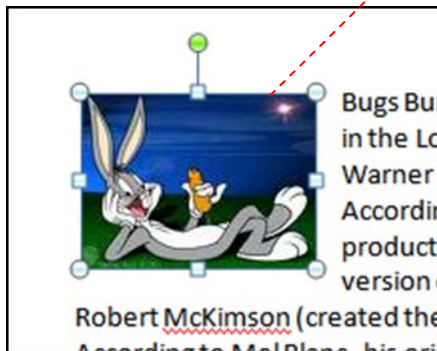

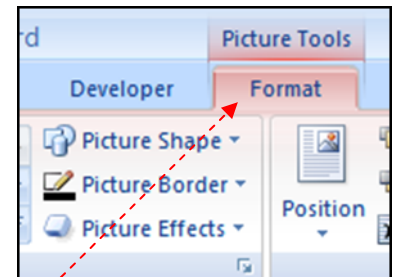

Click the Microsoft button in the upper left to display this menu →

Special Tabs

Selecting images and drawn objects will cause new tabs to appear. These tabs contain buttons which pertain to the type of object you have selected.

Double clicking the object will make the tab appear AND display its buttons.

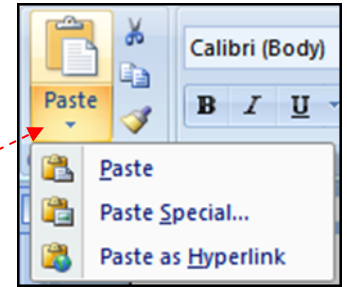

Quickly Browse Through Tabs

If you hover your mouse within the ribbon area and spin your mouse wheel, you can quickly scroll through the tabs.

Split Buttons

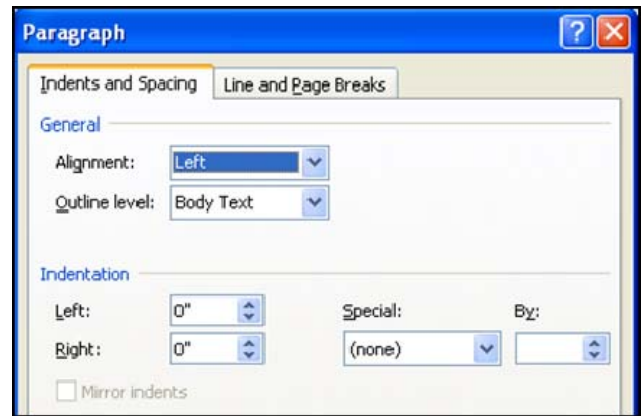

Note that some buttons have two halves. The top part issues its most common use while the bottom part brings up a list of commands.

Accessing More Options

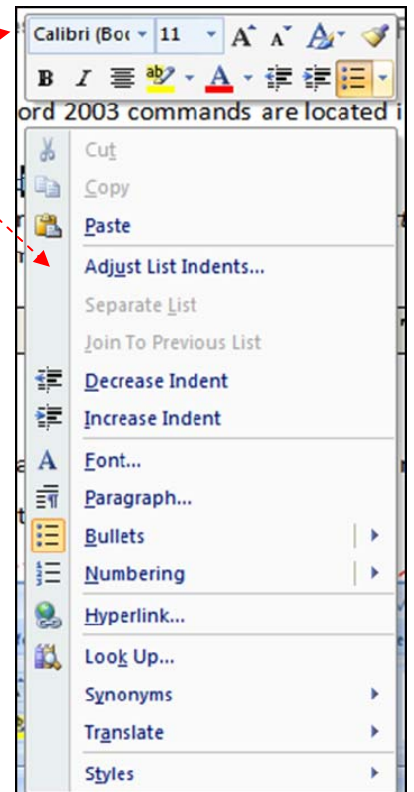

Some sections on the ribbon have a "More" arrow which will bring up window with more options. Most of these you have probably seen before.

Right Click for Quick Commands

If you right click an area or object in Word, you will get a pop-up menu and usually a small formatting tool bar. The pop-up menu commands will change to reflect the area or type of object you right clicked.

Keyboard Shortcuts

Most shortcut keys still work (for example, **Control + S** saves). However if you used to navigate the menu by pressing the **ALT** key, the letters or numbers you have to press now will be a different sequence.

The Quick Access Toolbar

This is the only customizable toolbar in Word. You can add and remove buttons from it and if desired, move its location to below the ribbon rather than above.

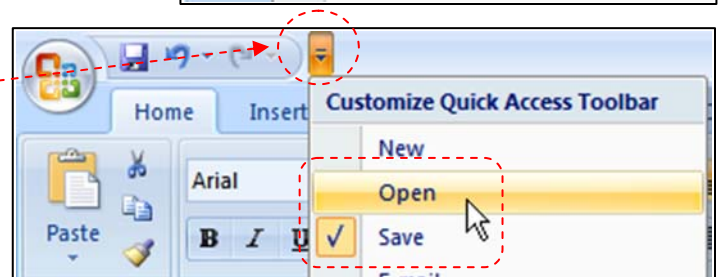

Adding Buttons to the Quick Access Toolbar

There are several methods of adding buttons to the Quick Access Toolbar:

Right click any button on any tab and select **“Add to Quick Access Toolbar”**.

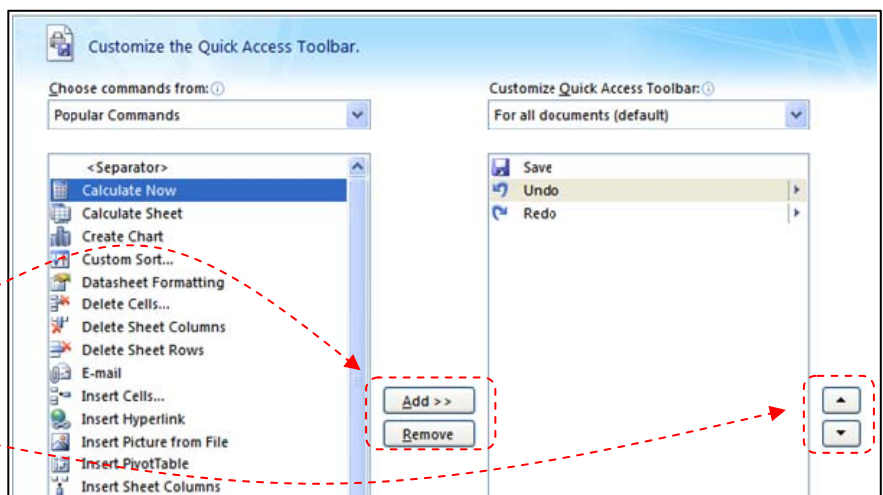

Click the drop down arrow on its right and then click the command you wish to appear on the toolbar. Click it again to remove the command.

To view all available buttons and organize the Quick Access Toolbar:

- Right click any button.
- Click **“Customize Quick Access Toolbar”**.
- Select an icon from the list then click the **“Add”** button.
- Organize the toolbar by using the up/down arrows.

Remove Buttons to the Quick Access Toolbar

- Right click the button to be removed.
- Select **“Remove from Quick Access Toolbar”**.

Move the Quick Access Toolbar Below the Ribbon

This will give you room for more buttons without cutting off your file on the title bar.

- Right click any button on the Quick Access Toolbar.
- Select **“Show Quick Access Toolbar Below the Ribbon”**.

NEW LOCATION OF BUTTONS FROM THE OLD STANDARD AND FORMATTING TOOLBARS

Standard & Formatting Toolbar Buttons – Word 2003	Word 2007 Location
